

## Chapter 5: Power System Performance

power quality	p. 120
harmonics	p. 121-145
more power flow	p. 122-126
power system stability	p. 127-128
coltage angle difference	p. 128-131

## Chapter 6: Power System Protection

	p.	
symmetrical components	p. 133-135	
fault current analysis	single line to ground fault	p. 135-137
	Line to line fault	p. 142
	double line to ground fault	p. 143
	3-phase faults	p. 144-145
overcurrent protection	p. 146-155	
protective devices	p. 155-157	
protective relaying	p. 157-159	
zones of protection	p. 159-166	
power transformer ratings	p. 167	
arc flash analysis	p. 168	

## Chapter 7: General Power Engineering

VOM metering	VOLT-OHM-Miliameter	p. 170
	Ammeter	p. 170
	Voltmeter	p. 172
	Ohmmeter	p. 174
	Wheatstone bridge	p. 175
Insulation testing	p. 175	
ground resistance testing	p. 176	

## Chapter 8: Codes & Standards

NEC	p. 179
NESC	p. 180

## Chapter 9: Special Applications

	p.	
lightning and surge protection	p. 182-187	
magnetic material classification	p. 187	
Reliability	SAIDI, SAIFI, etc	p. 188-189
Illumination Engineering	p. 189-194	
Demand & Energy Management Calculations	p. 195	
Load Factor	p. 195	
Economics Problems	p. 195-198	

## Chapter 10: Devices & Power Electric Circuits

	p.	
Batteries	Characteristics and Ratings	p. 200
Switches and Power Supplies	Diodes	p. 202-205
	Rectifiers	p. 205-208
	Thyristors	p. 208
	Inverters	p. 208
PLCS	p. 209	
RTUs	p. 209
